1. Introduction

In today's era, everyone wants convenience and comfort in daily life activities but everywhere, it is not possible. Travelling is also a major part of day-to-day activities and in same case also, people want same comfort assistance in whole journey.

Taking this statement, we came to the solution that will provide the comfort as well as secure journey provided.

Driver Booking is a web application which lets you book Driver for the intercity and intra-city travel purpose using your browser and provides you the best service that will make your journey more luxurious.

The objective of Driver Booking project is to Book driver for your car. So, customers do not need to call & spend unnecessary time in order to reserve preferred Driver. They can go online and reserve any preferred kind of Driver they want, which is available at that time.

Document Purpose

This system will allow customer as well as driver to register themselves. This system will allow the user to Book driver for their car. Our drivers are highly trained and professional. Information will be share with each other on the process of booking. Our driver are easy to reach. We provide drivers that are near your area.

Enhance Business Processes:

To be able to use internet technology to project to the global world instead of limiting their services to their local domain alone, thus increase their return on investment (ROI).

Online Driver booking Management:

A tool through which admin can register a driver and provide many functionalities to them. The admin also receives some set of functionalities which help in managing the Driver Booking web application.

Problem Statement

The problem statement of Driver Booking project is to develop an online process of Driver Booking Service. Present system is manual and it is time consuming as well as non-standardized in terms of returns.

Currently, customers need to make a manual call-in order to rent / reserve preferred drivers. The software of Driver Booking System will check their file to see which Driver is available for rental. The objective of Driver booking project is to book driver for your car.

So, customers do not need to call & spend unnecessary time in order to reserve preferred Driver.

Product Scope

This system will allow customer as well as driver to register themselves. This system will allow the user to Book driver for their car. Our drivers are highly trained and professional. Information will be shared with each other on the process of booking. Our drivers are easy to reach.

We provide drivers that are near your area.

- Spring-boot, jsp and React Technology is used for the development of the application.
- General customers as well as every age group will be able to use the system effectively.
- Web-platform means that the system will be available for access 24/7 except when there is a temporary server issue which is expected to be minimal.

Aims & Objectives

Specific goals are: -

- To produce a web-based system that allow the admin to add driver and provide functionalities to its role.
- Maintain driver database.
- Self-registration for drivers and users.

2.Overall Description

Product Perspective:

2.1.1 Existing system function:

Existing system for a society is based on our traditional way of booking of drivers. If customer want a driver for their car, they have to make call or contact the agency which provide drivers or one have to go in search of driver. Moreover, it more cumbersome method.

Even after finding driver there maybe issues, about car, money, kilometres, days etc.

You have to negotiate for the price even you are using your own car and petrol.

so, here comes our driver booking system which will help you to find driver near you, with minimal rate and you can even get driver by car category.

□ III. PROPOSED SYSTEM

Product functionality:

Driver Booking System provides the features for admin, customer and driver. It includes several functionalities describes as below:

Customer Management:

It provides facility to add, update, delete and view the customer who are register for booking a driver. We can view their details and also update it.

Admin functionality:

The admin can maintain the driver as well as customer database and keep track of it.

Our system will mainly focus on booking driver and providing safety to our customers. helps.

Benefits of Driver Booking System

- It greatly reduces the time needed to generate nearest location driver.
- It is very easy to use.
- Driver can choose drive.
- It saves a lot of time, money and labour.
- Eco-friendly: The monitoring and the overall business becomes easy and includes the least of paper work.
- The application is open 24/7.

Users and Characteristics:

Admin:

- Admin can login to the system.
- View the list of all Drivers.
- View the list of all Customers.
- Add a new Driver.
- Delete Driver.
- Delete Customer.
- Update Driver.
- Update Customer.

Customer:

- Customer can login to the system.
- View his/her details.
- Book a Driver.

Operating Environment:

Server Side:

Processor: Intel® Core™ i5-9300H CPU @2.40GHz

HDD: Minimum 500GB Disk Space

RAM: Minimum 8GB

OS: Windows 10, Linux or later

Database: MySQL

Client Side (minimum requirement):

Processor: Intel® Core™ i5-9300H CPU@2.40GHz

HDD: Minimum 50GB Disk Space

RAM: Minimum 4GB

OS: Windows 10, Linux or Later

Design and Implementation Constraints:

- The application will use React, JavaScript, Spring boot, jsp and CSS as main web technologies.
- Several types of validations make this web application a secured one and SQL Injections can also be prevented.
- Since Driver Booking system is a web-based application, internet connection must be established.
- The Driver booking System will be used on PCs and will function via internet or intranet in any web browser.

Future Scope of the Project:

- In future we would like to integrate the tracking of drivers.
- In future the proposed update feature of Driver booking allows the user associates to track the current status of the journey.
- Also, we would like to evaluates the remaining time till the passenger reaches its destination.
- The Driver tracking feature is appreciated widely everywhere, at the time of emergencies such as accidents, the tracking device will trigger an alarm that will simultaneously inform the attendants about the incident & thereby asking for help.

3. Software Requirement Specification

Introduction:

This document is the SRS report for the *Driver Booking System* Web Application.

This system has the following main component:

1. Implement the different types of user – Administrator, Customer and Driver.
2. Implement registration facility for customers
3. Provide Driver registration
4. Manage Driver and Customers

Purpose:

The objective of Driver booking project is to Book driver for your car. So, customers do not need to call & spend unnecessary time in order to reserve preferred Driver.

They can online and reserve any preferred kind of Driver they want, which is available at that time.

They can go online and reserve any kind of Driver they want and that is available.

Scope:

This system will allow customer as well as driver to register themselves. This system will allow the user to Book driver for their car. Our drivers are highly trained and professional. Information will be share with each other on the process of booking. Our driver are easy to reach.

We provide drivers that are near your area.

Overview:

Driver booking System will provide drivers for your car. We provide driver for short trips as well as for long trip, for going market or for picking up your children from school, we are there for you. Our drivers are highly trained and professional as well as follow every safety measures.

Functional Requirement:

This section provides a requirement overview of the system. Various functional

modules that can be implemented by the system will be-

- Customer Registration and authentication:
 - i Customer information is store in database by fill the registration functionality.
 - ii Customer is allowed to browse through the driver and select accordingly.
 - iii System will also authenticate user credential if customer is already register.
- Driver Registration and authentication:
 - i Driver is registered by Admin after checking the details and information provided by driver.
 - ii Driver is allowed to check its details.
- Admin:
 - i Admin is allowed to update and delete customer.
 - ii Admin can view the list of customers as well as list of drivers.
 - iii Admin can update as well as delete the customer.

Hardware Requirement:

Since the application is internet based, all the hardware shall be required to connect to internet.

Software Requirement:

- As the system is on server, so requires any scripting language JSP etc.
- System will require a capable Database like MySQL, Oracle etc.
- System will communicate with the database for storing customers, driver and booking.

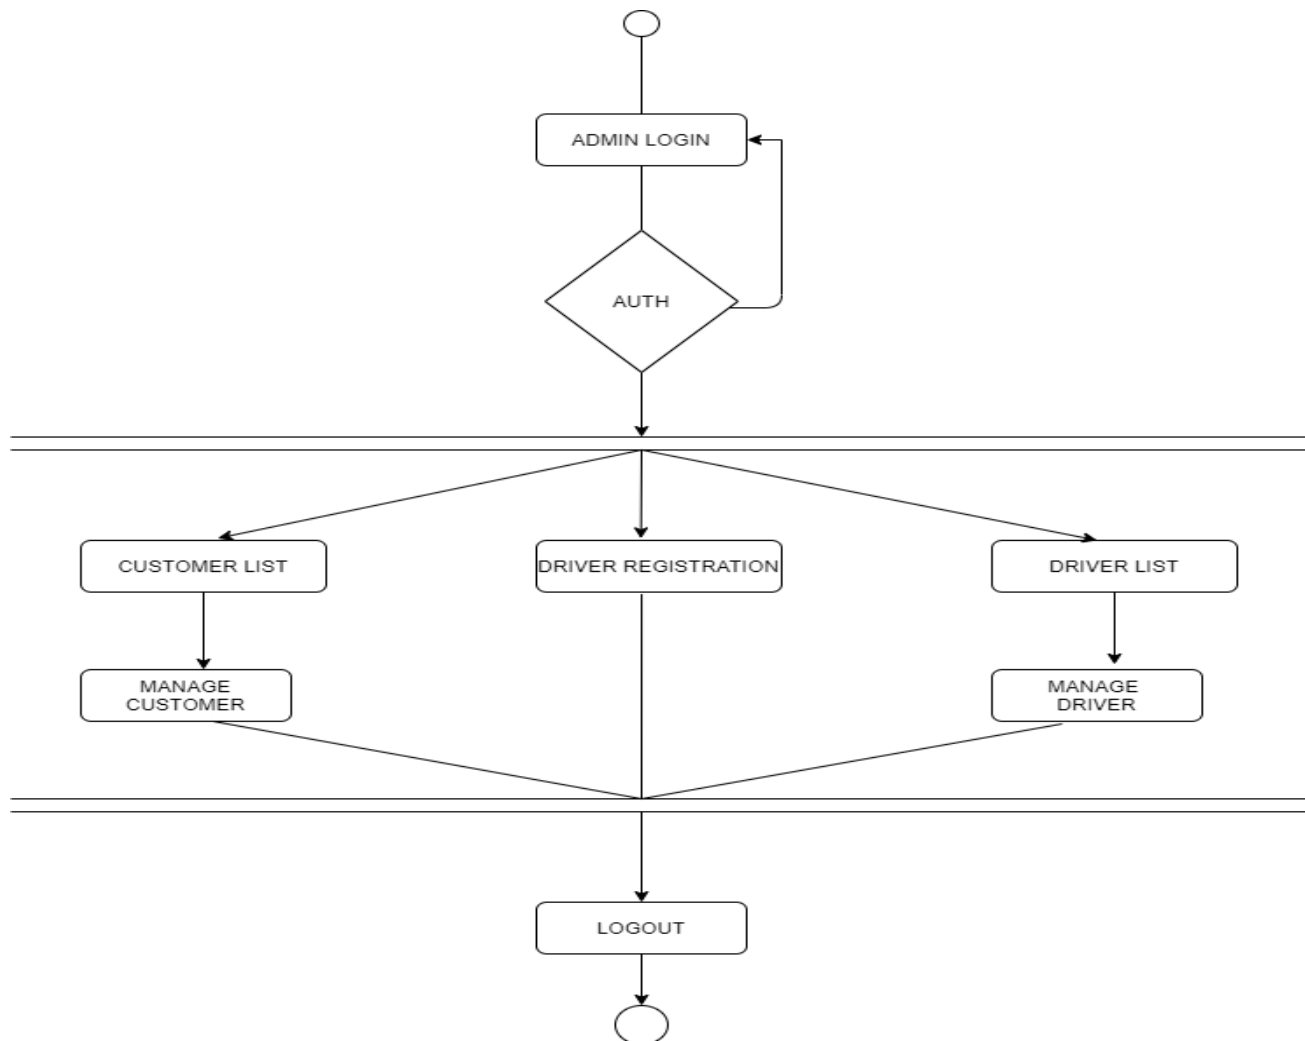

Non-functional Requirement:

- **Usability:** System will be efficient to use, easy to use.
- **Portability:** This system can be used on Windows or Linux OS. System is easy to port on any other server.
- **Performance:** The Driver booking System has adequate performance requirements. it does not take more than 5 seconds to load new pages.
- **Integrity:** Whenever the changes are made related to customer data and his orders, it shall be reflected in the database as well.

Admin:

System Admin will Add/Delete/Update the Customers and Drivers details.

Welcome to Driver Booking

Hire best car drivers near you, professional and trained to follow mandatory safety guidelines.
— Keeping you safe with Safety!!!

Office drivers

Driving to and from the office daily can be a hassle considering the city traffic and the long wait. Let us Drive You while you rest at the back, take a quick nap, have a little bite, hum to some nice music or slip out a magazine to your destination!

Driver for Night

Night drives are risky and can lead to accidents if you're not used to them. Our driver network is trained to handle night drives as seamlessly as the day!

Explore the city

Moved to a new city or have grown in this one? Cities are constantly transforming with newer spots to explore and they stay quite unexplored as we seldom get the time or the thought of leaving our homes or work! Take this chance to look around the city and explore, while we drive you to the best spots around!

Services page:

[Driver booking](#) [Home](#) [Service](#) [Contact](#)[Customer-Register](#) [Customer Login](#) [Admin Login](#)

Catch a drive quick

Just key in your location and assess the kind of trip you'd like to take. We show the fare estimate and allocate a driver from our wide network of well-trained drivers spread across cities at every kilometre. Like a flash, our drivers will appear in a matter of minutes to get to your destination safely.

Outstation Drivers

Why wait for a long weekend for a relaxing trip to your favourite getaway? Let the pressure of driving long distances, safety and taking care of the route be on our gentle chauffeur. Let your retreat start while you're on the road instead of when you reach your destination.

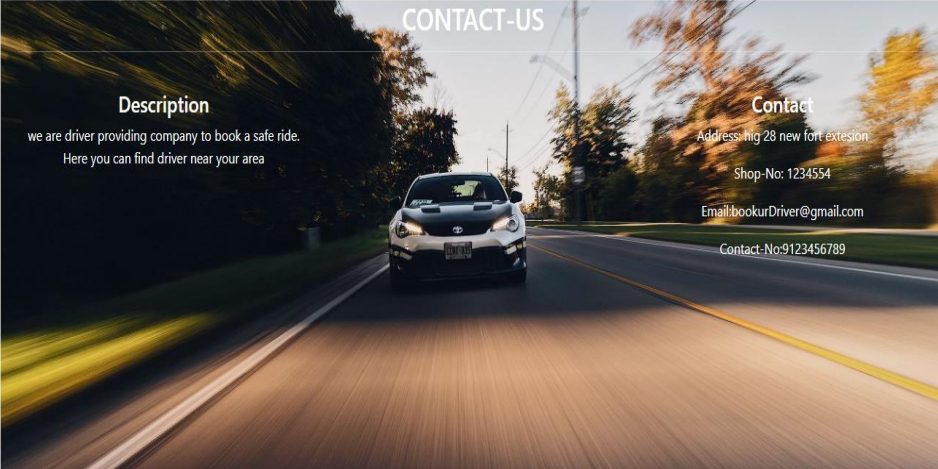

Let us DriveUr kids to school

Reaching the school safely on time and getting back home secure, is what we want all as parents want. With Us, it is now hassle free. No need to stuff your little one in a packed van with an untrustworthy driver; instead let them commute in your own car with or without you along with a trustworthy, trackable driver!

On Successful Booking:

Conclusion

Driver booking system, web application will be easy to customer for hire a driver. Customer can book the driver as per their requirement and get the driver details with acknowledgement to/from the driver online thereby saving time and money.

Future Scope

This project can be enhanced further by adding tracking system of the location and speed of car. The software is flexible enough to be modified and implemented as per future requirements. We have tried our best to present this free and user-friendly website to Customer as well as to Driver. Message and Email alerts for various happenings on the website can be added to the system so that customers do not miss the updates.
